

# what is CHADIS?

## We care about your child's development and mental wellness

There are a lot of important things we can't see with our eyes or listen to with a stethoscope. That's why surveys and questionnaires are helpful to determine if your child is growing and developing well. We can also use these tools to check for symptoms of anxiety, depression or other behavioral health conditions.

## CHADIS is an online tool that makes it easier to get this information

Burlington Pediatrics/ Mebane Pediatrics uses CHADIS, an online tool, that makes it much more convenient for you to complete survey forms. CHADIS is HIPAA-compliant and your health information is protected. We also save paper and time!

## The Burlington Pediatrics/ Mebane Pediatrics Portal makes it easy

Have you signed up for your child's portal account? This is the easiest way to use CHADIS. There are also other benefits including getting your shot records, forms completed, and messaging our providers.

## Quick Tips

If your child is scheduled for a well visit, your surveys will be sent to your portal account a few days before your visit. Please complete these as soon as possible. If not, no worries! We will text you a link when you check in.
